

DRONE INSURANCE POLICY SUMMARY

1) What is covered

a. LIABILITY:

The university maintains liability insurance for drones below a certain weight (airframe + payload) for loss or damage caused in the operation of the drone. Given that the insurer periodically updates the parameters of coverage an inventory of drones is maintained by the Risk Management Office to ensure liability protection for those conducting this work.

Please contact riskanalyst@uvic.ca to add a drone to the inventory, or if you require evidence of liability insurance for your drone operation.

b. PROPERTY:

The existing property insurance policies of the university do not current provide any coverage for drones. If you have drones it may be self-insured by the university in the event of loss or damage depending on the circumstances of the loss and available funding.

2) Who is covered?

All University of Victoria departments, faculties, ancillaries conducting work on behalf of the university and in good faith.
