The worldwide pandemic has laid bare the existential challenges of our time, including systemic racism, economic inequality and environmental collapse. There are calls to rethink our political systems and social relations. What might this new world look like? Join us to consider the fate of the human experiment with one of the eminent thinkers of our time.

Noam Chomsky is a distinguished linguist, philosopher, cognitive scientist, historian, and political activist. Institute Professor Emeritus at MIT, he is author of numerous groundbreaking works on topics ranging from linguistics to war, politics, and mass media. Now in his ninth decade, he remains a trenchant and timely social critic.
