

# Faculty of Social Sciences Department of Geography

Geography 491 A02
ADVANCED TOPICS IN GEOGRAPHY
DYNAMICS OF THE CRYOSPHERE
FALL 2016

Instructor: Dr. Randy Scharien

Office: David Turpin Building B122

Office Hours: Tuesday 14:30-16:30 or by appointment

E-mail: randy@uvic.ca

## **Course Description**

Snow and ice dominate the Canadian landscape. There is virtually no area in Canada which escapes the influence of snow and ice. We skate on frozen ponds, ski down snow laden mountains, drive through snow blizzards and watch how ice jams in rivers cause rivers to swell and floods to occur. The duration and the thickness of snow and ice increase rapidly northwards, and glaciers are found in mountainous areas and in large parts of the Arctic region. Given that snow and ice impact heavily on the Canadian way of life, this course seeks to understand the dynamics of snow and ice in physical, climatological, and hydrological contexts. This course will examine snow properties, snowcover distribution, glacier hydrology, melt runoff, and ice in its many forms (lake ice, river ice, sea ice, and ground ice). The application of remote sensing and other remote observing systems to understanding the cryosphere will be examined. This course will also examine the implications of climate change on the cryosphere in Canada and beyond.

# **Class Meetings**

Tuesday, Wednesday, and Friday 13:30 to 14:20 in CLE A316

# **Text and Readings**

There is no required text for this course. Assigned readings will be posted on CourseSpaces (<a href="http://courseSpaces.uvic.ca">http://courseSpaces.uvic.ca</a>). If necessary, readings may be made available on the course reserve in the main library. If you come to

class prepared it will be easier to remain committed to, and engaged with, the course materials throughout the term. This means you should have read and considered the relevant readings before each class meeting.

For project work and the critical review assignment you will be <u>expected</u> to make additional use of scientific and policy reports, journal articles, and book chapters in support of your work. Recommended sources will be provided by the course instructor.

## **Learning Outcomes**

At the end of this course, you should be able to:

- Explain the unique physical conditions which give rise to cryosphere features, differences between cryosphere features and their geographies, and the role of cryosphere in a changing global climate system.
- Summarize and compare the range of approaches and tools used to address critical issues associated with the cryosphere by various local, provincial, national, and international actors.
- Use academic literature and materials from class discussions and activities to analyze a current cryosphere related problem and develop an understanding of the applicability of different conceptual and analytical frameworks for examining the problem and proposing solutions.
- Show improvement in writing, debating, and presenting skills, in individual and group formats.

## CourseSpaces

You will be required to access the CourseSpaces site for required readings, important announcements, instructor notes, your grades, and additional information (e.g. discussion topics). Please take the time to familiarize yourself with CourseSpaces if you have not already done so.

# **Course Organization**

### **CLASS MEETINGS**

Each class meeting will typically comprise an overview on a topic given by the instructor, followed by a class discussion. Overview lectures and class discussions will build from assigned readings. Where appropriate, time will be allotted to students presentations. There will also be 1-2 guest speakers at different points throughout the term. They will provide unique and interesting perspectives on cryosphere research, with linkages to industry applications where applicable.

### TAKE HOME ASSIGNMENTS

Two take home assignments will be given during the course. Further details, including evaluation criteria, will be provided in the class.

### JOURNAL ARTICLE REVIEW

Each student is required to conduct a critical review of one peer-reviewed, published, journal article that addresses some aspect of snow and ice hydrology (e.g. techniques or applications). The review will comprise a written component, assessing the article within the context of the literature. It will also comprise a presentation component, where the critical review is presented to the class and followed by a discussion led by the reviewer. You are encouraged to use Power Point or other preferred media to communicate your review and lead your discussion. Students should consider choosing a journal article and related references which align with their chosen (or anticipated) term project topics. Further details and evaluation criteria will be provided in class.

### TERM PROJECT

A group term project (3-4 people) will address an interesting aspect of the cryosphere. Groups are expected to develop a proposal in early January, and to design a scientific experiment which spans the length of the term. Students will have to consider logistical constraints, available data, software and manpower in the design of the project. Guidance and feedback will be provided by the course instructor.

The choice of your topic for your project is up to you and your group but a one page proposal is due in class on September 30, 2016. The final two class meetings will be used for term project presentations, to be given in a conference style format. The final term project report is due on the last day of classes for the term.

Required format, evaluation criteria, and suggested topics will be provided in class.

#### FINAL EXAM

There is no final exam in this course.

## **Sample Topics**

This is a non-exhaustive list of topics from which literature review and term project areas of focus may be derived.

Hydrologic cycle in the Arctic

Environmental factors influencing glacier runoff

Ice growth and decay

Role of climate on the distribution of permafrost

Role of permafrost in northern hydrology

Northern snow re-distribution and change

Role of snow in the northern water budgets

Role of snow in the terrestrial energy budget

Role of lake ice in the climate system

Role of sea ice in the climate system

Snow metamorphosis

Factors affecting the timing of snowmelt

Cryosphere evidence for climate change in northern environments

Factors driving the variability in sea ice extent

The influence of ice sheets and glaciers on sea level change

The relationship between sea ice and ocean current circulation

Ocean-ice interactions

The Freshwater budget of the Arctic

Thermal properties of snow covers

Snow water equivalent (SWE) patterns of snowcovers in British Columbia

Water chemistry of evolving snowpacks

Reflectivity of snow and ice with application to remote sensing

Remote sensing approaches

Glacier snowline detection

Ground based measurements

Modeling runoff

# **Grading Scheme**

Assignments (3 at 10% each)	30%
Journal article critical review	20%
Project Proposal	5%
Project Presentation	10%
Project Report	30%
In-class contributions	5%
ΤΟΤΔΙ	100%

## **Late Assignment Policy**

Late assignments are subject to significant penalties: 5% for each 12 hour period following the due date and time. Exceptions are not permitted except for circumstances involving medical or compassionate reasons. Written verification as proof may be requested at the discretion of the instructor.

### **Grade Scale**

A+	Α	A-	B+	В	B-	C+	С	D	F
90-	85-	80-	77-	73-	70-	65-	60-	50-	0-
100%	89%	84%	79%	76%	72%	69%	64%	59%	49%

## **Course Topics**

Topic 1: Components of the cryosphere

Topic 2: Material properties of water, ice, and snow

Topic 3: Energy exchanges

Topic 4: Snow and freshwater ice Topic 5: Glaciers and Ice Sheets Topic 6: Melt runoff and floods

Topic 7: Sea ice
Topic 8: Permafrost

Topic 9: Climate interactions and climate change

# **Possible Field Trip**

Depending on student interest and the occurrence of ideal conditions, we may augment our course experience with a short (2 day maximum) field trip. The field trip would include a demonstration of snow sampling protocols and examination of the influence of forcing mechanisms on snow pack properties. The field trip would occur outside of the normal course schedule. More details will be provided at the commencement of the course.

### **Tentative Course Schedule**

Week	Tuesday		Wednesday		Friday	
1	Sep 06	NO CLASS	Sep 07	Introduction	Sep 09	Term Project Discussion
2	Sep 13	Topic 1	Sep 14	Topic 1	Sep 16	Topic 2
3	Sep 20	Topic 2 and ASSINGMENT 1 DUE	Sep 21	Topic 3	Sep 23	Topic 3
4	Sep 27	Topic 4	Sep 28	Topic 4	Sep 30	Topic 4 and PROJECT PROPOSAL DUE
5	Oct 04	Topic 4	Oct 05	Topic 4	Oct 07	Topic 4
6	Oct 11	Topic 5 and ASSINGMENT 2 DUE	Oct 12	Topic 5	Oct 14	Topic 5
7	Oct 18	Guest Speaker	Oct 19	Topic 5	Oct 21	Topic 5
8	Oct 25	Topic 6 and ASSINGMENT 3 DUE	Oct 26	Topic 6	Oct 28	Topic 6
9	Nov 01	Topic 6 and CRITICAL REVIEW DUE	Nov 02	Topic 6	Nov 04	Topic 6
10	Nov 08	Topic 7	Nov 09	No class	Nov 11	No class
11	Nov 15	Topic 7	Nov 16	Topic 7	Nov 18	Guest Speaker
12	Nov 22	Topic 8	Nov 23	Topic 8	Nov 25	Topic 9
13	Nov 29	Topic 9	Nov 30	Project Presentations	Dec 02	Project Presentations TERM PROJECT DUE

# **Course Experience Survey (CES)**

I value your feedback on this course. Towards the end of term you will have the opportunity to complete a confidential course experience survey (CES) regarding your learning experience. The survey is vital to providing feedback to me regarding the course and my teaching, as well as to help the department improve the overall program for students in the future. When it is time for you to complete the survey, you will receive an email inviting you to do so. If you do not receive an email invitation, you can go directly to <a href="http://ces.uvic.ca">http://ces.uvic.ca</a>. You will need to use your UVic NetLink ID to access the survey, which can be done on your laptop, tablet or mobile device. I will

remind you nearer the time, but please be thinking about this important activity, especially the following three questions, during the course.

- 1. What strengths did your **instructor** demonstrate that helped you learn in this course?
- 2. Please provide specific suggestions as to how the **instructor** could have helped you learn more effectively.
- 3. Please provide specific suggestions as to how this **course** could be improved.

## **Academic Integrity**

Academic integrity requires commitment to the values of honesty, trust, fairness, respect and responsibility. It is expected that students, faculty members and staff at the University of Victoria, as members of an intellectual community, will adhere to these ethical values in all activities related to learning, teaching, research and service. Any action that contravenes this standard, including misrepresentation, falsification or deception, undermines the intention and worth of scholarly work and violates the fundamental academic rights of members of our community. Students are advised to consult the university's Policy on Academic Integrity in the University Calendar. The instructor reserves the right to use plagiarism detection software programs to detect plagiarism in term papers.

The University of Victoria is committed to promoting, providing and protecting a positive and safe learning and working environment for all its members.
